TULANE UNIVERSITY OF LOUISIANA,

(Formerly, 1847-1884, the University of Louisiana.)

PRESIDENT OF THE UNIVERSITY:

WM. PRESTON JOHNSTON, LL.D.

ADMINISTRATORS:

His Excellency, M. J. FOSTER, *Governor of Louisiana*,
Hon. A. D. LAFARGUE, *Superintendent of Education*, } *Ex-Officio.*
Hon. JNO. FITZPATRICK, *Mayor of New Orleans*. }
Hon. CHAS. E. FENNER, (*Assoc. Justice Supreme Court of La.*) *President.*
JAMES MCCONNELL, *First Vice-President.*
Hon. E. D. WHITE, (*U. S. Senator*.) *Second Vice-President.*
C. J. BICKHAM, M. D., HENRY GINDER, B. M. PALMER, D. D., LL.D.
CARTWRIGHT EUSTIS, JNO. T. HARDIE, W. R. STAUFFER,
E. H. FARRAR, S. H. KENNEDY, R. M. WALMSLEY,
L. M. FINLEY, J. B. LEVERT, GEO. Q. WHITNEY.
WALTER C. FLOWER, J. C. MORRIS,

MEDICAL FACULTY.

STANFORD E. CHAILLÉ, M. D., Dean,
Professor of Physiology, Hygiene and Pathological Anatomy.
JOSEPH JONES, M. D.,
Professor of Chemistry and Medical Jurisprudence.
ERNEST S. LEWIS, M. D.,
Professor of General and Clinical Obstetrics and Diseases of Women and Children.
JNO. B. ELLIOTT, M. D.,
Professor of the Theory and Practice of Medicine and Clinical Medicine.
EDMOND SOUCHON, M. D.,
Professor of Anatomy and Clinical Surgery.
ALBERT B. MILES, M. D.,
Professor of General and Clinical Surgery.
LOUIS F. REYNAUD, M. D.,
Professor of Materia Medica, Therapeutics and Clinical Medicine.

LECTURERS, INSTRUCTORS, DEMONSTRATORS.

HENRY BAYON, M. D., Lecturer and Clinical Instructor on Physical Diagnosis.
H. S. LEWIS, M. D., Lecturer and Clinical Instructor on Physical Diagnosis.
ISADORE DYER, M. D., Lecturer and Clinical Instructor on Dermatology.
J. D. BLOOM, M. D., Lecturer and Clinical Instructor on Diseases of Children.
LUTHER SEXTON, M. D., Lecturer and Clinical Instructor on Minor Surgery.
EDW. W. JONES, M. D., Lecturer and Clinical Instructor on Diseases of Eye and Ear.
RUDOLPH MATAS, M. D., Demonstrator of Anatomy.
A. MCSHANE, M. D., Assistant Demonstrator of Anatomy.
P. E. ARCHINARD, M. D., Demonstrator of Microscopical Anatomy and Bacteriology.
O. L. POTHIER, M. D., Assistant Demonstrator of Microscopical Anatomy and Bacteriology.
A. L. METZ, M. Ph., M. D., Instructor in charge of the Chemical Laboratory.
T. A. QUAYLE, M. Ph., M. D., Assistant Instructor in charge of the Chemical Laboratory.
A. L. METZ, M. Ph., M. D., Instructor in charge of the Pharmaceutical Laboratory.
WARREN S. BICKHAM, M. D., Demonstrator of Operative Surgery.

MEDICAL DEPARTMENT.

1. This institution, founded in 1834 as the "Medical College of Louisiana," became in 1847 the "Medical Department of the University of Louisiana," and in 1884 the "Medical Department of the Tulane University of Louisiana." It is the oldest medical college in the southwest, and has the greatest number of alumni and of students. To April, 1893, it had registered the names of 10,528 students, and of these it had conferred diplomas on 3030—namely, on 2795 graduates in medicine, and 235 graduates in pharmacy.

2. The next annual course of instruction in this department, now in the sixtieth year of its existence, will begin on Thursday, October 19, 1893. The commencement will be held on Wednesday, April 18, 1894. There will be only three holidays, Christmas, New Years, and Mardi Gras. The first two weeks of the term will be devoted especially to Clinical Medicine, Surgery, Obstetrics and Gynæcology in the wards and amphitheatre of the Charity Hospital; and to practical work in the Laboratories of Practical Anatomy (Dissecting Rooms), of Chemistry, of Pharmacy, of Histology and Bacteriology, and of Operative Surgery. These laboratories will be open for instruction on Monday, October 23, 1893.

Recent Changes.

3. Since the issue of its last catalogue the Medical Department has suffered two deplorable losses. Dr. T. G. Richardson, Emeritus Professor of Surgery, died May 26, 1892, after thirty-one years of distinguished service, viz.: fourteen years as Professor of Anatomy, seventeen years as Professor of Surgery, and twenty of these years as Dean. Although forced by disease to resign in 1889, yet his interest in the college continued until his death, and among many services conferred by him, he co-operated with Mrs. Richardson in bestowing on the college the inestimable benefit of a new building provided with the ample and well equipped laboratories long very much needed.

4. Dr. Samuel Logan, after seventeen years of able and faithful service, thirteen years as Professor of Anatomy and four as Professor of Surgery, died January 12, 1893, loved, honored and regretted by colleagues, graduates and students.

5. The vacancy caused by his death has been filled by appointing to the chair of surgery Dr. Albert B. Miles, who was for ten years Demonstrator of Anatomy, and has been for the last eleven years House Surgeon of the Charity Hospital, and for the past seven years Professor of Materia Medica and Therapeutics.

6. The vacancy caused by the transfer of Prof. Miles has been filled by the appointment to the chair of Materia Medica, Therapeutics and Clinical Medicine, of Dr. Louis F. Reynaud, who, during the past three years, has rendered most satisfactory service as Lecturer and Clinical Instructor of Physical Diagnosis.

7. Prof. Joseph Jones, M. D., has been, at his own request, relieved from clinical teaching, after twenty-six years of this service, and his former Chair of Chemistry and Clinical Medicine has been changed to the Chair of Chemistry and Medical Jurisprudence. Medical Jurisprudence including Toxicology, will, therefore, constitute an additional branch upon which graduates must have passed a satisfactory examination.

8. The Medical Department, *as well as all reputable Southern Medical Colleges*, have added to the obligatory studies heretofore required for graduation, not only Medical Jurisprudence, but also one laboratory course in Chemistry, one in Histology and Bacteriology, and one in Operative Surgery. For these additions and for other important changes as to requirements for admission and for graduation, and as to fees, see subsequent paragraphs.

New Building with its Laboratories.

9. In October, 1893, the Medical Department will occupy a new site, twice the size of the former one and only two squares from the Charity Hospital, and

thereon a four-story building (three stories above a most excellent basement) which will provide ample accommodation for larger classes and for all the needs now requisite to medical education; larger and better lecture and recitation rooms, and best of all ample and well equipped laboratories for Chemistry, for Pharmacy, for Practical Anatomy, for Microscopical Anatomy, Pathology and Bacteriology, and working rooms for practical Physiology and for gross Pathological Anatomy. These admirable laboratories, now added to the unrivaled practical advantages for clinical, anatomical and pathological studies given by the Charity Hospital, will enable the Medical Department now to provide its students with unsurpassed advantages for their medical education. For other details of the new building see the last page of this catalogue and pages 3 and 4 of the cover.

Clinical Instruction at the Charity Hospital.

10. The Faculty solicits the special attention, not only of students, but also of graduates of other colleges to the unequalled clinical and anatomical advantages of the Medical Department.

It is universally admitted that without abundant anatomical and clinical material, no medical school, however numerous or eloquent its professors, can possibly fit its pupils for practical professional life. It is scarcely necessary to state that it is only in large cities that such advantages can be procured; but it is of paramount importance that the opportunities there afforded should be properly utilized; that the students should be required, under the direction of the teacher, to examine patients for themselves, to keep record of cases, to note daily changes which may occur, and thus acquaint themselves by personal observation with the progress and termination of diseases and accidents. The mere introduction of a patient into an amphitheatre, and the discussion of his case by the professor in the presence of a large class, is no substitute for bedside instruction, such as is offered by the great Charity Hospital of New Orleans; and no reduction of lecture fees, not even their entire abolition, can possibly compensate for the lack of such opportunities. The use of the wards of this noble institution, with its *seven hundred beds*, and its annual occupancy thereof by eight thousand patients, and the use of the two clinical buildings with more than twelve thousand annual outdoor patients, have been given by acts of the Legislature to the Professors of the Medical Department of the Tulane University of Louisiana for the practical instruction of its students, not only in Medicine and Surgery, but also in Obstetrics and Gynæcology. Medical students are given access to the Charity Hospital, without payment of any hospital fees, and far better opportunities for the study of diseases therein than are usually enjoyed in the hospitals of other cities. For the study of the diseases of the Southwest, and also of the diseases of the negro race, there is no field comparable to the wards of this hospital. Between the new building of the Medical Department and the Charity Hospital there are only two squares, which distance is readily walked within three minutes.

The following table of 8423 cases treated in the wards of the Charity Hospital during the year 1892 will give some idea of the great advantages possessed by the Medical Department for the practical study of Medicine and Surgery:

DISEASES.	NUMBER OF CASES.	DISEASES.	NUMBER OF CASES.
Fevers and other general.....	2,412	Venereal	446
Nervous system.....	519	Bones and Joints.....	165
Circulatory system.....	191	Local Injuries and Diseases.....	1,338

Genito-Urinary Organs	392	All other Diseases.....	229
Women (189 obstetrical cases).....	449		
		Total	8,423

THE ANNUAL REPORT OF 1893,

To the President of the University, by

PROF. STANFORD E. CHAILLÉ, M. D.,

Dean of the Medical Faculty, at the

Annual Commencement of the

MEDICAL DEPARTMENT OF THE TULANE UNIVERSITY OF LOUISIANA,

Held at New Orleans, April 5th, 1893.

Mr. President: During the fifty-nine years that have elapsed since the origin of our medical department in 1834 there have been registered on its record of students 10,528 names, and 3030 students have been graduated, viz: 2795 in medicine and 235 in pharmacy.

The present session closes the eighth year of my service as dean and the progress of our college during this time is indicated by dividing the past twelve years into three series, of four years each, and noting the average number of students for these three series. During the first four of the last twelve years (1882-85) the annual average was 216, during the next four years (1886-89) 292, and during the last four years (1890-93) 404.

The greatest number ever recorded was registered during the present session, viz: 420. However, there has been no notable increase during the past three years, for we had 407 students in 1891 and 415 in 1892. At the close of last session an increase to about 450 was anticipated and would have been more than realized but for the following causes:

Our prosperity always varies with the public welfare and the financial condition of the southwest during the past year has not been most favorable. However, in spite of this hindrance, our classes, in consequence of the superior educational resources of our college, would have long since exceeded the gratifying numbers they have attained, but for the two impediments now to be stated. On the one hand there are numerous medical students who, influenced by poverty, ignorance or mistaken self-interest, desire a diploma, not as a proof of medical attainments, but chiefly as a license to practice medicine; and, therefore, they seek the diploma which can be most cheaply and easily obtained. On the other hand, there are many medical colleges noted especially for supplying this demand, conferring diplomas, which are the result of a medical education, small in quantity and as cheap as it is inferior in quality.

Medical education furnishes no exception to the inexorable laws of political economy, which force all to admit that the highest prices must be paid for whatever is best; and it is not a just cause for complaint that many medical colleges charge for their inferior advantages less than is charged for the very superior advantages of our college.

But the faculty with which medical diplomas are conferred on ignorance inflicts very serious evils; thereby the public is greatly injured by a supply of pretenders to knowledge who are unfitted to prevent and to cure disease; the medical profession is vitiated; and the progress of every college is hampered and retarded, which attempts, as ours has done, better to promote the public welfare and the cause of education.

All other civilized nations and many of our sister states have become sufficiently enlightened to appreciate these evils and to enact efficient laws to rectify them; but the sovereign people of

Louisiana have, by legislative inaction, thus far shown a tender consideration for ignoramus and quacks, very encouraging to them, but most discouraging to the progress of medical education, to the improvement of the medical profession, and to the highest welfare of the public. From pretenders to medical knowledge the people have both the right and the power to protect themselves; but, as long as their legislators fail to exercise this power the people forfeit all right to complain that colleges are to be found which screen ignorance from public recognition by disguising an infinitesimal smattering of knowledge with a medical diploma; whereby the progress of all colleges, striving for what is best, is retarded.

The reforms needed in medical education were stated in my first annual report in 1886, and are as follows: Proofs of adequate preparatory education should be demanded of every student seeking admission to a medical college; graded courses of at least three years should be enforced; greater attainments should be required for graduation; the sessions should be lengthened; the corps of teachers should be increased; well equipped laboratories and all other educational agencies should be provided; and professors should be paid fixed salaries, so that they would not be dependent upon the number of students for their daily bread, and therefore would not be tempted to keep the standard of medical education as low as now contents, to its great detriment, an inappreciative public.

There are many proofs that these reforms have been kept steadily in view, and that our medical department has made, during the past eight years, gratifying progress. Not only has the number of our students been nearly doubled, but also the number of our teachers. Two laboratories, the indispensable agents of modern medical education, have been added to our means of instruction, a pharmaceutical laboratory in 1887, and a microscopical and bacteriological laboratory in 1889. Our sessions have been lengthened. Although our expenses have increased in greater ratio than our receipts, yet the faculty has every year voluntarily contributed greater sums than ever before to promote the better instruction and greater comfort of our students. Our unattractive yard has been transformed into ornamental grounds, and there have been many improvements to our buildings. Important measures have been adopted to increase the efficiency of our graduates. In 1853, when I was graduated, and for many years thereafter, most of our graduates had studied medicine only seventeen months, and during this time had attended only two collegiate sessions, of only seventeen weeks each. Now, none are graduated who have studied medicine less than three years, and have attended fewer than two much longer sessions. The majority of our graduates now attend three or more annual sessions. Of ninety-four medical

students graduated this day fifty-nine have attended from three to six annual sessions. Year by year our examinations have become more exacting, so that we annually supply the public with a greater number of thoroughly well prepared graduates. Other indisputable proofs could be given that there has been manifest improvement of our medical department in many things, and that in no one thing has a backward step been taken.

I am now able to announce that the most important reforms ever undertaken by our college will probably be enforced at our next session. These same reforms, as also others, were enforced in 1892, by the American Medical College Association, to which belong all reputable northern medical colleges. A Southern Medical College Association has since been organized, and it is now believed that all reputable southern medical colleges will soon unite in demanding, no more than heretofore, from medical students who have already attended one or more collegiate sessions, but in enforcing on every student who begins his collegiate career, after Sept. 1, 1893, the following important requirements:

First—Evidences of preparatory education.

Second—Attendance on not less than three annual sessions.

Third—Lengthened sessions.

Fourth—A laboratory course in histology and bacteriology, in chemistry and in operative surgery.

Fifth—The addition of medical jurisprudence to the curriculum of studies.

Such are the reforms that will probably be agreed to by the southern medical colleges, leaving every college to add such other requirements as it may deem proper. The leaders of the medical profession have striven for very many years to force these reforms upon the medical colleges, and I have indulged the ambition and have repeatedly expressed the hope that the first four of these reforms might be accomplished before the disappearance of our medical department passed out of my hands.

The efficient execution of these reforms will force every college to supply additional teachers; to require of all teachers longer service, and to provide greater and more costly educational advantages. Therefore, a medical education will hereafter require of every student the expenditure, not only of more time, but also of more money. Hence a marked diminution in the number of our class is expected at the next session, and, as a necessary result, the receipts into our treasury will be much diminished. While this unfavorable result is probable, it is very certain that our annual expenses will be very much increased, and that the members of the medical faculty will find their incomes much less, although their responsibilities and labors will be greater.

The sole consolation for this most unwelcome result will be the conviction that by this personal sacrifice interests very dear to the faculty will be promoted, the best interests, both of the medical profession and of the public. Time alone can decide whether public opinion will sustain our efforts for the common welfare, or whether our people will continue, by legislative inaction, to foster the many medical pretenders and impostors in our midst, who, to the detriment of our college, as well as of the public, are permitted to fatten upon the credulity of the ignorant.

The important reforms, probably to be enforced at the next session, could not be efficiently executed by our medical department but for the great liberality of Dr. and Mrs. Richardson, whereby a new building has been provided, contain-

ing the well-equipped laboratories indispensable to some of these reforms. In truth, the donation of the new building was chiefly due to the ardent desire of the donors to promote the reforms now contemplated, and to their wise appreciation of the great benefits which would be thereby conferred on the public, as well as on the medical profession.

Our medical department has always possessed to an extent unsurpassed by any medical college, the very greatest of all the many needs of medical education, the free use of a great hospital with the unsurpassable clinical and other practical advantages, which necessarily result from the more than 20,000 patients who annually seek relief from disease in our invaluable Charity Hospital. When to this greatest need are added the ample and well equipped laboratories, which have become almost as essential to medical education as is a great hospital, it is certain that our medical department will continue to give to medical students greater advantages than can be found elsewhere in the south, and will continue to maintain its enviable position among the foremost medical colleges of the United States.

Graduates of 1893, I congratulate you cordially on your release from the great anxiety imposed on you by your examinations, I heartily sympathize in the happiness with which you greet your well earned diplomas, and I welcome you to the ranks of your chosen professions.

The prosperity of our college depends primarily on the efficiency of its faculty, but of the secondary causes not one is as important as is the influence exercised by our army of graduates in annually recruiting the ranks of our students. You, by testifying to the superior advantages you have here enjoyed, can induce medical students to avail themselves of the still greater resources which even the next session will provide.

Exceptional labors and responsibilities are imposed on the faculty, especially for the next session. Our college must be removed from our old building, dear even to you, but far dearer to me by closest association during forty-two of its forty-six years of existence. Our new building demands toilsome preparation for useful occupation; our new and extensive laboratories require very onerous equipment; more exacting regulations must be adopted; new official positions must be filled; and we must provide for the probability of smaller receipts and the certainty of much greater expenses. In this time of trial and of unusual anxiety, your faculty rely with confidence on you and on all graduates for even more active support than heretofore in our efforts to promote the welfare of the inseparable trinity—medical education, the medical profession and the public.

Confident that your professional knowledge now gives you power to confer great benefits on others and thereby to gain success and reputation for yourselves, power to elevate your profession and to bestow credit on our college, I very earnestly wish you happiness and prosperity, and tender to you the affectionate farewell of your faculty.

Mr. President: You are respectfully requested now to confer degrees upon 104 graduates. The ninety-four whose names will first be called are entitled to the degree of doctor of medicine, and the ten who will be last named are entitled to the degree of master of pharmacy.

Prof. Wm. Preston Johnston, president of the university, then conferred degrees upon 104 graduates, whose names are published in the annual catalogue for 1893.

The Gold Medal and Certificate of the First Degree of Merit was awarded THIS HOUSE,
for the Best Printing of Historical and Art Works published in Louisiana,
by the World's Cotton Industrial Exposition of 1884-85.

There were 1135 deaths and 189 births, and a daily average of 670 indoor patients. In addition to the 1423 "in-door" patients there were 41,026 consultations with "out-door" or visiting patients to the clinical buildings. These 41,026 consultations with out-door patients furnished for instruction the following valuable material, viz.: 7810 consultations on medical diseases, 13,247 on surgical, 1693 on nervous, 3885 on skin and venereal diseases, 2620 on gynaecological, 4805 on the diseases of children, 6030 on eye, ear and throat diseases, and 936 dentistry consultations.

The grand total of in-door patients and consultations with out-door patients in the Charity Hospital was 49,449, of whom 19,798 were colored. There are sixteen wards for females. Of the fifty-two wards in the Charity Hospital there are twenty-three medical, fourteen surgical, two obstetrical and two gynaecological wards, two for children, four for diseases of the nervous system, two for venereal diseases, two for diseases of the eye and ear, and one for skin diseases; and all these wards are accessible to students.

It is manifest that these facilities for *genuine* clinical teaching, which recent improvements in the hospital have greatly increased, are now unsurpassed by any medical college in the United States, and that such advantages in medical education are being more and more appreciated is attested by the increasing size of the classes.

Clinical Buildings for Out-door Patients.

Among these recent improvements, the most important one is the erection upon the hospital grounds, and the opening in April, 1892, of two admirable clinical buildings, exclusively for out-door patients, heretofore disposed of in the wards of the hospital to the disadvantage both of in-door and of out-door patients.

One building is the "Men and Boys' Clinic," the other is the "Women and Children's Clinic." Each building is subdivided into eight different services, and seven of these are alike in both buildings, viz.: A service for medical cases; for nervous; for surgical cases; for venereal and skin diseases; those of the eye; of the ear, nose and throat; and for cases of dentistry. In addition to these seven services the "Men and Boys' Clinic" has a surgical service for boys, and the "Women and Children's Clinic" has a gynaecological service.

These two new clinical buildings, while greatly promoting the proper care, both of in-door and of out-door patients, very notably increase the advantages given to our students and graduates for the practical study of diseases generally, and particularly of specialties.

11. The professors and clinical instructors are Attending Physicians or Surgeons of the Hospital, and visit their wards daily, accompanied by the students, who are thus brought into immediate contact with the sick and wounded, and are taught practically auscultation and percussion, analysis of urine, the use of the microscope in diagnosis, the application of dressings, etc. Surgical operations are performed and lectures delivered upon selected cases in the amphitheatre of the Hospital.

Special clinical instruction is given to the candidates for graduation and to all students, who are, for this purpose, divided into classes, and assigned to the respective professors and clinical instructors in charge of wards in the Hospital. The classes thus formed interchange courses, so that all students enjoy equal advantages. Competent Chiefs of Clinic aid the clinical teachers in developing this system of instruction. The following professors and clinical instructors and their respective chiefs of clinic and assistants will be on duty the ensuing session:

PROF. ERNEST S. LEWIS, M. D.....	{	P. MICHINARD, M. D.	} <i>Chiefs of Clinic.</i>
		R. U. BORDE, M. D.	
		H. S. COCRAM, M. D.	
		S. FORTIER, M. D.	
		J. H. BEMISS, M. D.	
PROF. JOHN B. ELLIOTT, M. D.....	{	P. E. ARCHINARD, M. D.	} <i>Assistant Clinical Instructors.</i>
PROF. EDMOND SOUCHON, M. D.		RUDOLPH MATAS, M. D.	
		JNO. J. LAURANS, M. D.	
PROF. ALBERT B. MILES, M. D.....	{	H. J. SCHERCK, M. D.	
		W. E. PARKER, M. D.	
PROF. L. F. REYNAUD, M. D.....		J. T. DEGRANGE, M. D.	}
DR. EDW. W. JONES.	} <i>Clinical Instructors.</i>	DR. _____.	
DR. ISADORE DYER.		DR. _____.	
D. J. D. BLOOM.		DR. H. S. COCRAM.	
DR. LUTHER SEXTON.		DR. _____.	
DR. HENRY BAYON.		DR. C. L. HORTON.	
DR. H. S. LEWIS.		DR. A. J. BLOCH.	

The regular lectures at the Hospital, on Clinical Medicine, by Professors Elliott and Reynaud; on Surgery, by Professors Miles and Souchon, and on Obstetrics and Diseases of Women and Children, by Prof. Lewis, will be delivered in the amphitheatre, daily, between 8:30 A. M. and 12 M.

Post-mortem examinations are made in the presence of the class by the Professor of Pathological Anatomy.

Diseases of the Eye and Ear are taught in the eye-wards and amphitheatre of the Hospital and constitute a part of the curriculum of the surgical chair.

Special instruction in diseases of the skin, diseases of children, physical diagnosis, and minor surgery, is given by the Lecturers on these subjects.

12. The Administrators of the Charity Hospital elect annually, by competitive examination in March, fourteen resident students, who are entitled to board and lodging in the institution free of charge, and fourteen externes, who serve as assistants in the out-door clinics. Three resident students in the Touro Infirmary are also elected annually by competitive examination.

Lectures and Laboratories.

13. *Lectures.*—Systematic didactic instruction will be given daily, immediately after the hospital clinics, in the new building of the Medical Department on Canal street, between Villere and Robertson Sts., only two blocks from the hospital. The means for illustrating the didactic lectures consist of numerous models in wax, papier maché, plaster and wood of rare and beautiful workmanship, executed in London, Paris and Florence expressly for the Medical Department; very many tables and diagrams; a complete series of specimens in materia medica; surgical and obstetrical instruments and appliances; a large collection of natural anatomical and pathological specimens and preparations, and a set of chemical and physical apparatus. The Professor of Anatomy illustrates his lectures with many specimens of microscopical anatomy under the microscope.

Hygiene and Medical Jurisprudence are now obligatory studies, and the lectures on these subjects are adequately illustrated.

Chemical Laboratory.

14. This Laboratory readily accommodates eighty-four students working at the same time, and one course therein will be obligatory on all first-course students, and after the next session on all candidates for graduation. It has been placed in charge of Dr. A. L. Metz, M. Ph., who has been during the last six years in charge of the Pharmaceutical Laboratory, and who continues in charge thereof. Dr. T. A. Quayle, M. Ph., has been chosen assistant instructor in these Laboratories. Special attention will be given to medical chemistry and to such knowledge of Chemistry as will prove of greatest service to the practising physician. Every student will be provided with a separate table, apparatus and reagents.

Microscopical Laboratory.

15. This laboratory readily accommodates eighty-four students working at the same time, and one course therein is obligatory on all candidates for graduation. Microscopical anatomy, both normal and morbid, and also bacteriology will be taught. This laboratory is in charge of Dr. P. E. Archinard, a pupil of Pasteur and of Koch, and during the last four years in charge of the Microscopical Laboratory in the old building. Dr. Archinard's assistant instructor is Dr. O. L. Pothier.

The fee for a special course in bacteriology will be \$25, but the fee for one regular course in microscopical anatomy and bacteriology is only \$15.

Operative Surgery.

16. Will be taught in the Laboratory of Practical Anatomy, or Dissecting Rooms, and one course therein is obligatory on all candidates for graduation. The instructor in charge will be Dr. Warren S. Bickham.

REQUIREMENTS FOR MATRICULATION AND FOR GRADUATION OF THE SOUTHERN MEDICAL COLLEGE ASSOCIATION.

17. In 1892 the American Medical College Association, to which belong all reputable northern medical colleges, and also some few southern medical colleges, enforced on medical students an educational qualification for admission and a three years' course for graduation. A Southern Medical College Association has since been organized and the Medical Department of the Tulane University of Louisiana, and all reputable southern medical colleges (which are not members of the American Medical College Association) are now members of the Southern Medical College Association. These southern colleges have united in requiring from students *who have already attended one full course*, only two full courses for graduation, and no educational qualification other than furnished by the final examination. But on students who may attend their first course in a medical college after September 1, 1893, the following new requirements for admission and for graduation will be obligatory.

"Requirements for Matriculation.

"Every student applying for matriculation must possess the following qualifications:

18. "He must hold a certificate as the pupil of some known reputable physician, showing his moral character and general fitness to enter upon the study of medicine. [For a blank form of this certificate see note 1.]

"He must possess a diploma of graduation from some literary or scientific institution of learning or certificate [for form of this certificate see note 2] from some legally constituted High School, General Superintendent of State Education, or Superintendent of some County or Parish Board of Public Education, attesting

(1) Secretary (or Dean) of 189...

(City) (State)

Dear Sir:

Mr. of
is a gentleman of good moral character. I recommend that he be allowed to enter upon his medical studies in your college. He has been my pupil months. Yours,
(Sign here)

(2) Secretary (or Dean) of 189...

(City) (State)

Dear Sir:

I have examined Mr. of
and find his scholastic attainments equal to those requisite for a second grade teacher's certificate, in our public schools. Yours,
Supt. Pub. Instruct.

the fact that he is possessed of at least the educational attainments required of second grade teachers of public schools; *provided*, however, that if a student so applying is unable to furnish the above and foregoing evidence of literary qualifications, he may be permitted to matriculate and receive medical instructions as other students, and qualify himself in the required literary departments, and stand his required examination as above specified, prior to offering himself for a second course of lectures.

19. "The foregoing diploma or certificate of educational qualifications, attested by the Dean of the Medical College attended, together with a set of tickets showing that the holder has attended one full course of medical lectures, shall be essential to attendance upon a second course of lectures in any College belonging to this Association.

20. "Branches of *Medical Science to be included in the course of instruction*: Chemistry, Medical Jurisprudence, Anatomy, Pathology, Physiology, Hygiene, Materia Medica and Therapeutics, Theory and Practice of Medicine, Surgery, Obstetrics and Gynecology, and special laboratory work as hereinafter provided.

"Qualifications for Graduation.

21. "Candidates for graduation, in addition to the usual requirements of medical colleges, must have attended three courses of lectures of not less than six months each in three separate years; must have dissected in two courses, and attended two courses of clinical or hospital instruction; and must have attended one course in each of the special laboratory departments, to-wit: 1. Histology and Bacteriology. 2. Chemistry. 3. Operative Surgery.

"These requirements shall not apply to any student who has received a course of medical lectures prior to September 1, 1893."

While the requirements and qualifications quoted in paragraphs 18-21 will be imposed by the Medical Department of the Tulane University of Louisiana, as a member of the Southern Medical College Association, yet the Medical Department will impose on all future candidates for graduation the following

Additional Qualifications for Graduation.

22. Every student, in order to become a candidate for graduation, must be of good moral character; must be 21 years of age; must write a thesis on a medical or pharmaceutical subject and present it to the Dean between January 1 and March 1 of his last session; must have paid all college dues, including the graduation fee; and must pass satisfactory examinations before the members of the faculty and have certificates of attendance upon the laboratory courses required.

23. *Qualifications for the Graduation of a Student Who has Attended a full Course in a Medical College Prior to September 1, 1893.*

He must comply with the above "Additional Qualifications" of Paragraph 22; must have attended in two separate years at least two full courses of lectures and of dissections, one course in operative surgery and one in a microscopical laboratory in a reputable regular medical college, and the last of the two annual courses required must have been in this institution, and he must present evidence of having studied medicine for three years ending with the date of his graduation; one of these three years may have been passed in study under the direction of a regular graduate.

Examinations After Two Annual Courses.

24. Students who have attended and paid for two courses, the last of which was in this institution, are permitted to undergo examinations upon one or more of the branches taught by the four chairs of Chemistry, Anatomy, Physiology, and Materia Medica. These examinations, if successful, will not be repeated,

but if the applicant should fail upon one or more of them, he will be granted a second trial, when he shall present himself for final examination.

Attendance on Three or More Annual Courses.

25. Students who have attended and paid for all of the required full courses, the last of which was in this institution, are thereafter entitled to attend the lectures without charge; and it is the earnest desire of the Faculty that they should avail themselves of this privilege, to the extent at least of one additional course, before applying for graduation. It is gratifying to be able to state that of the ninety-four M. D. graduates of 1893 fifty-nine had attended three or more courses; and their high standing at the final examination and their better preparation for the practice of their profession more than compensated them for their longer attendance upon lectures.

FEES.

26. It will be noticed that the fees of this institution will now amount to a total of \$465 for a three years' course, instead of \$335 for the former two years' course.

Considering the exceptional advantages for practical instruction in hospital and in laboratories, and the constant care and labor bestowed upon the pupils, the charges are as low as are compatible with the superior advantages given; and the Faculty therefore appeal to their professional brethren throughout the Southwest to continue their support to an institution which does not seek to increase the size of its classes by pecuniary rivalry and *discreditable underbidding*, but by offering a *full equivalent for its charges*.

Table of Fees.

27. FOR FIRST COURSE STUDENTS OF 1893-4 TAKING THREE FULL COURSES.

	1ST YEAR.	2D YEAR.	3D YEAR.
Matriculation Fee	\$5 00	\$5 00	\$5 00
Professors and Lecturers	120 00	120 00	120 00
Demonstrator of Anatomy	10 00	10 00	
Chemical Laboratory	15 00		
Microscopical Laboratory		15 00	
Operative Surgery			10 00
Diploma or Graduation Fee			30 00
Totals	\$150 00	\$150 00	\$165 00

All fees are payable in advance.

28. *Matriculation Fee.*—In this, as in every college of the Southern Medical College Association, every person, whether student or graduate, admitted to the privileges of this College shall hereafter pay a matriculation or registration fee of \$5 for every session he may attend; and shall not be entitled to admission to either College or Hospital until registered.

29. *Breakage Fees.*—A breakage fee of \$5 must be deposited for every course in the Chemical, in the Pharmaceutical and in the Microscopical Laboratory to reimburse needless injuries inflicted on these laboratories and their contents. At the end of every session the breakage fee will be refunded in whole or in part, depending on the charges incurred by the student.

30. Medical students who have attended and paid for one full course and are to be candidates for graduation in 1894 must pay all the fees of the third year and also for one course (if one has not been taken) in the Microscopical Laboratory (\$15), and for a second course with the Demonstrator of Anatomy (\$10).

31. Medical students who have attended and paid for two full courses and are to be candidates for graduation in 1894 must pay all the fees of the third year (except the professor's fee of \$120), and in addition \$15 for one course (if one has not been taken) in the Microscopical Laboratory.

32. Medical students who have attended and paid for two years of our former three years' course and are to be candidates for graduation in 1894 must pay the same fees as in paragraph 31, and in addition \$80 for professors' fees.

33. All other medical students who have attended and paid for one or more courses taken prior to September 1, 1893, and are not to be candidates for graduation until 1895, will be credited with the courses attended and with the fees they have paid on the basis of the Table of Fees, par. 27.

34. Graduates of this college and all medical students, who have paid all fees in the Table of Fees, will not be charged the professors' fees, but will be charged the matriculation fee and the fees for all laboratory courses they may voluntarily attend.

35. Students who do not attend full courses, but only *partial or special* courses, must pay for the tickets of the professors whom they may attend, \$20 each; for one course in the chemical and in the microscopical laboratories, \$20 each, and for other fees as in the Table of Fees.

36. Graduates of other recognized medical colleges must pay for the professors' fees, \$70, and thereafter will be entitled to the same privileges given to the graduates of this college. They can not, however, obtain its diploma without passing the final examination, without having attended the laboratory courses required of our graduates, and without paying the graduation fee.

37. Graduates in Pharmacy and in Dentistry will be credited the first year of the three years' course, but will not be graduated in medicine until they have attended two courses with the Demonstrator of Anatomy, and, after 1894, one course in a Chemical Laboratory.

38. After the next session, 1893-94, neither this nor any college of the Southern Medical College Association, nor probably any reputable medical college in the United States, will recognize either the courses or the diplomas of any medical college which may permit students to be graduated after only two courses, or which may require less for graduation than is demanded by the Southern Medical College Association.

Instruction in Pharmacy.

The Medical Faculty is also authorized by law to grant diplomas in Pharmacy, and has exercised this privilege since 1838, having now 235 graduates, 180 of whom have been graduated during the past sixteen years.

39. The students of Pharmacy are required to attend two annual courses of lectures given by the professors on Chemistry and Medical Jurisprudence, on Materia Medica and Therapeutics, and on Hygiene, and to attend one course in the Chemical and two courses in the Pharmaceutical Laboratory.

Instruction in the Pharmaceutical Laboratory is graded, and consists of a junior and of a senior course. These courses are designed to fit the student to conduct the processes of manufacturing and of dispensing in the most thorough and economical manner.

40. Reputable women are admitted as students to the Chemical and to the Pharmaceutical Laboratory, but not to the lectures of the professors.

41. Pharmacy students who may begin their first course after September 1, 1893, will be subjected to the educational "requirements for matriculation" enforced on medical students (see par. 18); and all candidates for graduation in Pharmacy must comply with the requirements specified in paragraphs 22 and 39; and must also submit to the Dean a satisfactory certificate of at least two years' practical experience under the instruction of a competent pharmacist.

42. *Fees.* The charge for one full course in pharmacy is \$75, viz.: for matriculation, \$5; professor's fee, \$35; chemical laboratory, \$15; and pharmaceutical laboratory, \$20. The fee for graduation is \$20. In addition every student must deposit a breakage fee of \$5 for the chemical and also for the pharmaceutical laboratory, in accord with paragraph 29.

43. Students in medicine who take also the course in pharmacy are required to pay only the laboratory fees. Students in pharmacy are not charged for the tickets of professors after attendance upon two full courses; but all students are charged for every laboratory course, however numerous these may be.

44. The Chemical and Pharmaceutical Laboratories will be opened for instruction on Monday, October 23, 1893.

TEXT-BOOKS.

45. The books mentioned below are recommended in preference to others; but *recent additions of any standard works* may be used in their stead. Only one text-book on each branch is indispensable. The cost of a set of text-books on all the branches is about \$50. The prices affixed below are now the lowest prices of the cheapest copies, usually in cloth:

SURGERY—Ashurst, \$4.75; Senn, \$4.50; Roberts, 3.75; American Text-Book, \$7.00; Wyeth, \$7.00; Operative Surgery—Treves, two volumes, \$8.00; Garmany, \$2.00; Aseptic Surgery—Gerster, \$4.50, Wharton, \$2.70; Diseases of the Eye—Nettleship, \$1.80; Swanzy, \$2.70; Diseases of Ear—Politzer, \$5.00; Sexton, \$3.60.

PRACTICE OF MEDICINE—Flint, \$4.75; Loomis, \$5.00; Pepper, \$10.

DERMATOLOGY—Van Harlingen, \$2.25; Ransom, \$1.00; Crocker, \$4.50; Shoemaker, \$4.50.

PHYSIOLOGY—Foster, \$4.00; Yeo, \$3.00; Landois, \$6.00; Chapman, \$4.50.

HYGIENE—Wilson, \$3.00; Parkes, \$4.50; Richardson.

PATHOLOGICAL ANATOMY—Green, \$2.50; Coats, \$4.75; Ziegler, \$5.00; Payne, \$3.00; Delafield & Prudden.

OBSTETRICS—Playfair, \$3.45; Lusk, \$4.25; American System, \$20.00.

GYNÆCOLOGY—Skene, \$6.00; Thomas, \$4.15; Emmett, \$4.00; Pozzi, \$12.

DISEASES OF CHILDREN—Smith, \$4.50; Day.

CHEMISTRY—Fownes, \$2.50; Attfield, \$2.50; Bloxman, \$4.00; Fresenius, \$4.00; Ganot's Physics, \$4.50; Parrish's Pharmacy, \$4.50.

MEDICAL JURISPRUDENCE—Taylor, \$4.50.

ANATOMY—Gray, \$5.80; Wilson, \$5.00; Richardson, \$4.00; Souchon's Résumé, \$2.00.

MATERIA MEDICA AND THERAPEUTICS—Wood, \$6.00; Rabuteau, \$7.00; Bartholow, \$4.10; Brunton, \$4.50; National Dispensatory, \$6.75.

DIAGNOSIS—DaCosta, \$6.00; Loomis, \$2.75.

DICTIONARIES—Dunglison, \$5.50; Gould, \$3.00; National, \$12.00.

CHEMICAL LABORATORY—Pellew, \$2.50; Simon, \$3.00.

MICROSCOPICAL LABORATORY—Histology—Prudden, \$1.25; Klein, \$1.75; Klein & Smith's Atlas, \$—; Bacteriology—Abbott, \$2.00; Sternberg, \$8.00.

PRACTICAL PHARMACY—Remington's Practice of Pharmacy, \$6.00; U. S. Pharmacopœia, \$3.50.

Students Preparing to Enter College

are recommended to study especially Balfour-Stewart's or Ganot's Physics; Fowne's Chemistry; Gray's Anatomy; Yeo's or Foster's Physiology, or any other standard works on these four subjects.

Expenses, Etc.

Information about houses for board and lodging may be obtained by application to Oswald Belfield, Janitor. The price usually paid by students is \$20 per month.

For any additional information, address "Prof. CHAILLÉ, DEAN, P. O. Drawer 261." Letters thus *officially* addressed secure prompt attention even if the Dean be absent.

STANFORD E. CHAILLE, M. D.,

NEW ORLEANS, LA., June, 1893.

Dean of the Medical Department.

GRADUATES OF 1893.

At the Fifty-ninth Annual Commencement, held Wednesday April 5, 1893, a memorial address on the Professional Services of Dr. T. G. Richardson was delivered by S. E. Chaillé, M. D.; the annual address on the Representative Life and Character of Dr. Richardson, by B. M. Palmer, D. D.; and the Valedictory by Dr. Wm. H. Woods, of Mississippi, and of the graduating class.

Degrees were conferred on 104 graduates, viz.: 94 in medicine and 10 in pharmacy, as follows:

Graduates in Medicine—94.

In addition to the above thirty-five pharmacy students, nine medical students took also the course in pharmacy, making a total of forty-four pharmacy students.

Summary of 420 Students.

Number of medical students.....	35 ²
Number of M. D.'s, ordinary medical students.....	6—358
Number of M. D.'s, gratuitous.....	27
Number of pharmacy students.....	35—62
Total.....	420

TULANE UNIVERSITY OF LOUISIANA.

Tulane University of Louisiana is divided into the University Departments of Philosophy and Science, Tulane College, Tulane High School, H. Sophie Newcomb Memorial College for Young Women, the Law Department, and the Medical Department.

TULANE UNIVERSITY admits as candidates for degrees, the graduates of colleges of established reputation, and such other persons as shall pass a satisfactory examination. University students may elect their studies, not less than three.

TULANE COLLEGE has four parallel and equivalent courses of study, denominated respectively, Classical, Literary, Scientific, and Engineering. Each has four classes, known as Freshman, Sophomore, Junior, and Senior.

The degree of Bachelor of Arts is conferred for the successful accomplishment of the Classical or Literary course, and the degree of Bachelor of Science for the completion of the Scientific or Engineering course.

The Faculty consists of the President, Wm. Preston Johnston, LL. D., and fifteen professors.

EXPENSES.—The tuition fee for a session of nine months in High School or College is \$80, payable in instalments at the beginning of each quarter of the session. Candidates for the degree of Doctor of Philosophy are exempt from tuition fees.

H. SOPHIE NEWCOMB MEMORIAL COLLEGE.

"The H. Sophie Newcomb Memorial College in the Tulane University of Louisiana, for the higher education of white girls and young women," has been established as a department of Tulane University through the munificence of Mrs. Josephine Louise Newcomb, of New York City.

Prof. Brandt V. B. Dixon is President of the College, and is aided by an efficient faculty.

Special courses are offered to those who find it desirable or necessary to restrict their work to one or more branches.

There is an Academic Department, which prepares students for the College.

The charge for tuition in the College is \$100, and in the Academy \$80, payable in quarterly instalments.

LIBRARIES.—Students have free access to the libraries connected with the University, containing about 50,000 volumes.

A large museum and an art gallery are also open to the public.

New Orleans offers unusual advantages for acquiring a practical knowledge of modern languages. Good board can be obtained at reasonable rates in cultivated families, selected by the Faculty, where European languages are constantly spoken.

LAW DEPARTMENT.

The *Law Department* was organized in 1847. Under a series of distinguished professors it has been in successful operation ever since.

The degree of Bachelor of Laws, granted by the University, entitles the person on whom it is conferred to admission to the bar of this State. The Faculty aim to prepare the student for admission to the bar, not only in this State, but also in any of the common-law States of the Union. The charge for lectures and instruction is \$80. The annual session begins in November and closes in May. Henry C. Miller, Esq., is Dean.

WM. O. ROGERS,
SECRETARY TULANE UNIVERSITY

DESCRIPTION OF THE NEW BUILDING,

WITH DIAGRAMS OF FIRST, SECOND AND THIRD FLOORS.

The general plan consists of a central building to provide two large lecture-rooms, one above the other; and of two wings chiefly for laboratories, but also for library, museum, offices, recitation and private rooms.

The disposition of the building for special purposes, and the seating capacity of lecture-rooms and laboratories are indicated in the diagrams.

An unusually well-lighted, well-floored, dry and commodious basement (beneath the first floor and not presented in the diagrams) provides ample storage rooms, and also excellent rooms for the greater comfort of students, such as a study-room, smoking-room, etc.

The lecture-rooms, laboratories, and all rooms except those in the basement, are free from all posts and pillars; and the two lecture rooms are abundantly lighted and ventilated, and each has a seating capacity of about five hundred.

The Microscopical Laboratory is believed to surpass in size (seating nearly 100 students), in lighting and in ventilation any in the United States.

The students' Chemical Laboratory has the same size and superiorities.

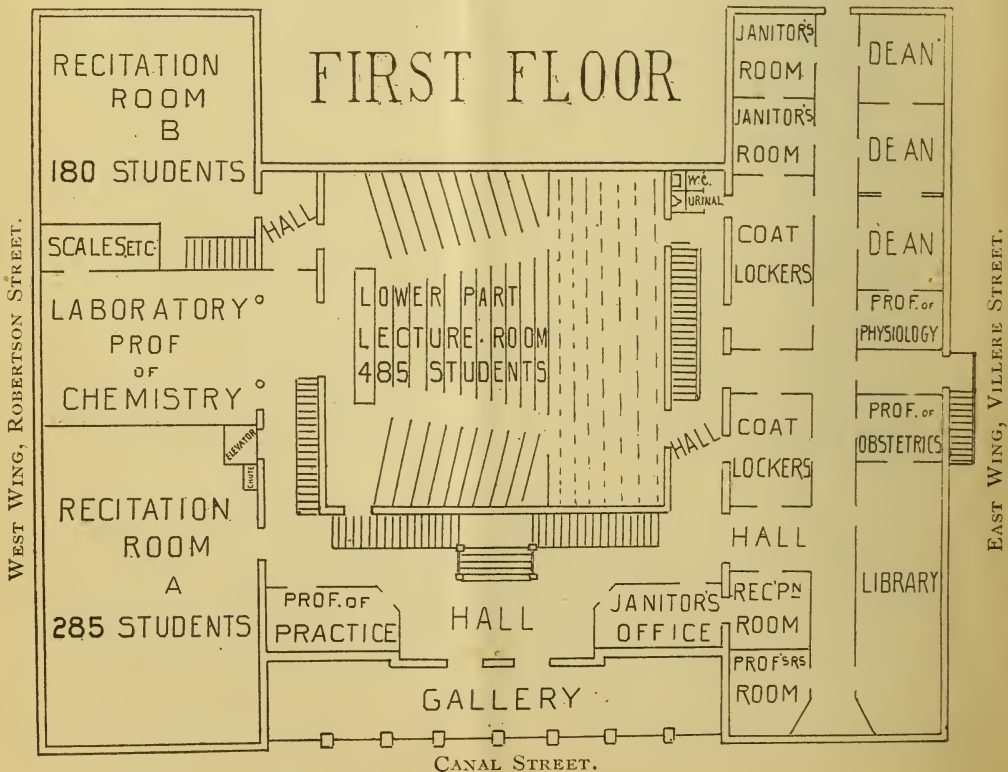

The Dissecting-rooms are believed to be unsurpassed in all essentials and can accommodate 200 students at work at the same time.

Lavatories and urinals are conveniently located on every floor.

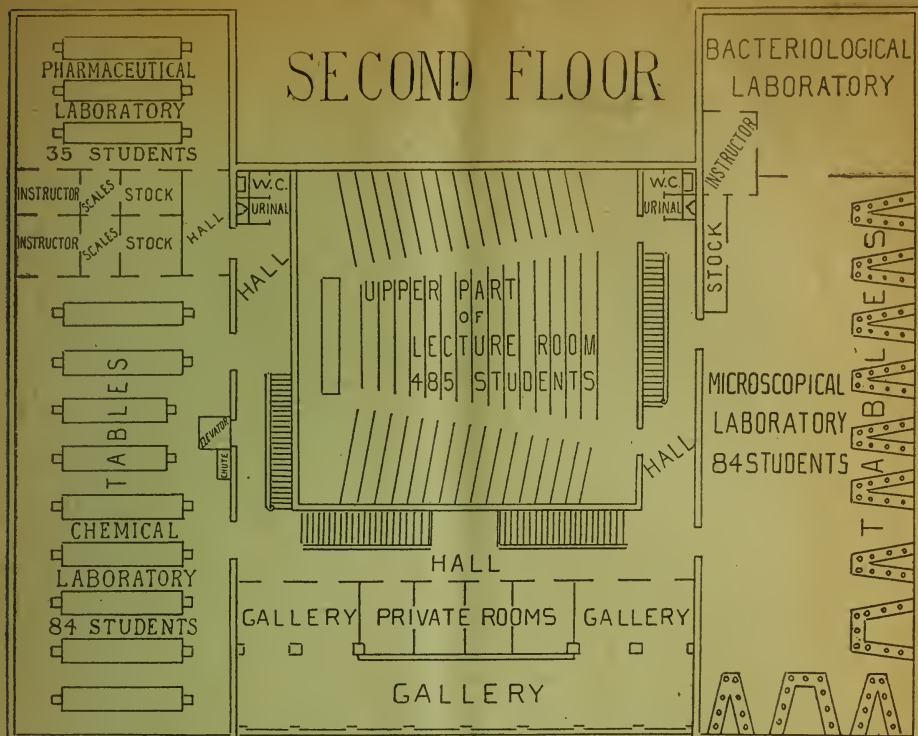

The building supplies several private rooms for special work of students or graduates.

The College lot measures about $256\frac{1}{2}$ feet front on Canal, $199\frac{1}{4}$ feet on Villeré street, $313\frac{1}{4}$ feet on Robertson street, and $102\frac{1}{4}$ feet on Customhouse street; containing therefore about 62,764 square feet, while the building occupies only 16,528 square feet; thus leaving ample space for ornamental and recreation grounds at present, and for extensions in the future.

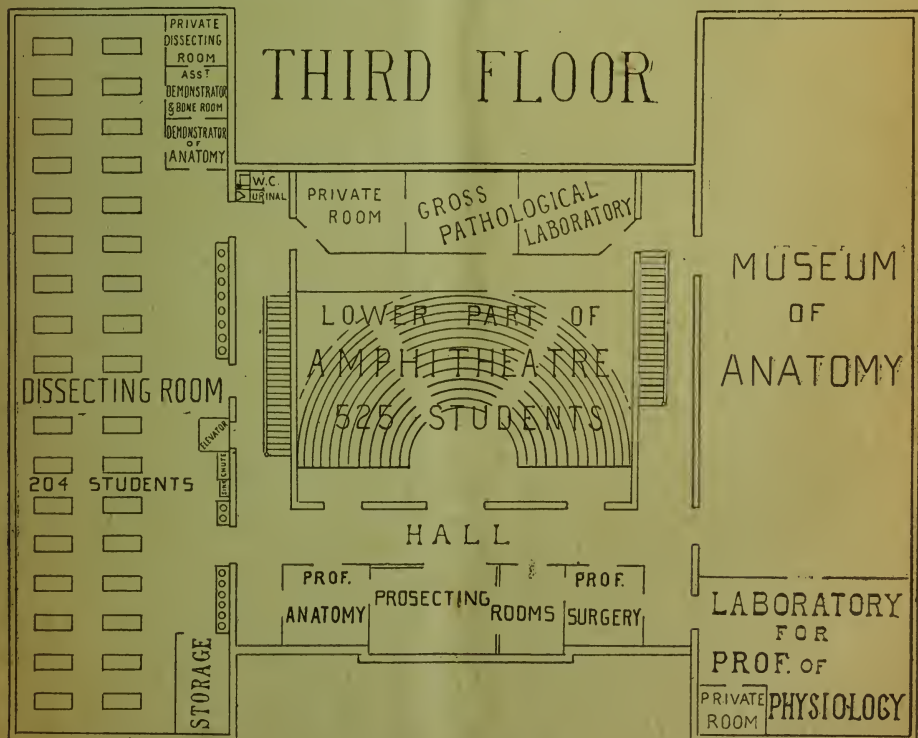

CENTRAL BUILDING.

SECOND FLOOR

THIRD FLOOR
